

1. Install Composer, XAMPP and MySQL;
2. Create an empty database in MySQL called "RGM";
3. In command prompt, go to the "RGM/RGM" folder and type the command "php artisan migrate";
4. In MySQL, create the roles "Super-Admin", "Admin", "User" and "Patient";
5. In command prompt, go to the "RGM/RGM" folder and type the command "php artisan serve";

NOTE: we used the IDE called PHPStorm, but feel free to use another one you like. You can change the settings of the project on the ".env" file.
